ABOUT

When the most innovative designs are met with sustainable function, you get BioLouvres.

From the brains and hands behind GRM Australia – Biowood and L'officina by Vincenzo, comes a louvre brand that only commits itself to maximizing an architectural element through specialized engineering and design.

FEATURES

| **Superb material quality**

Available in a wide range of building profiles, BioLouvres is made of reconstituted wood plastic composite using natural cellulose fibre from plantation harvested wood and combined with resin.

| **Resistance features**

Our products are water, termite, mould, and mildew resistant.

| **Environment-friendly**

Fully-recyclable and also suitable for indoor environments with very low volatile compounds emissions at an E1 rating,

| **Architectural element**

BioLouvres is made of Biowood plastic composite that looks natural and can stand alone as an architectural element altogether.

FEATURES

| Global Green Tag Certified

With the environment in mind, BioLouvres is a sustainable timber alternative that doesn't bleach and reduces carbon footprint.

| Fire-retardant

CSIRO-tested to be selfextinguishing and has a spread of flame index of zero.

| Longevity against deterioration

With proven time-tested suitability for marine, intertidal and salt-spray environments; does not splinter, crack or warp.

| High-performance and low-maintenance

Depending on foot traffic and orientation, its coating enables it to last three times longer than the normal coating.
