1. Product Appearance

EQUITONE [lines] LT is a through coloured panel with no coating. As the panel has an honest, pure and natural appearance, colour differences are possible. The surface of the sheet is characterised by fine sanding lines and white spots. The EQUITONE [lines] features grooves to the front face of the board. It should be noted that the grooves surface is a smooth marble like effect. The rear receives no back-sealing coating.

2. Colour

The colour is throughout the sheet. Natural colour differences, possibly accentuated by the orientation of the sheet, the viewing angle and the effects of light and moisture, are possible. The sheet becomes a little lighter with aging. The surface of the sheet is characterised by grooved surface lines. White spots are inherent to the material.

The risk of colour differences between the various sheets decreases when the whole quantity is ordered at once.

3. Product Composition

EQUITONE [lines] LT sheets consist of the following:

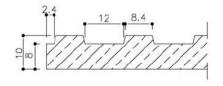

- Portland cement
- Selected mineral fillers providing extra smooth surface
- Organic reinforcing fibres
- Mineral and organic pigments
- Functional additives

4. Production Method

EQUITONE [lines]LT sheets are manufactured on a Hatschek machine, are double pressed, autoclaved calibrated and sanded. Afterwards EQUITONE [lines]LT is made water repellent on the front and back by means of a hydrophobation.

5. Dimensions

EQUITONE [lines] LT is available in 10mm thickness.

Rectified trimmed

2500mm x 1220mm

3050mm x 1220mm

The dimensions of the grooves are purely indicative. These are nominal dimensions subject to manufacturing tolerances. The grooves are longitudinal in the sheet.

For further information, please contact Email: info.australia@equitone.com www.equitone.com EQUITONE Australia, Suite 201/198 Harbour Esplanade, Docklands, 3008 Vic, Australia

6. Technical Properties

EQUITONE [lines] LT cladding panels conform to the requirements of EN 12467:2012+A1:2016 "Fibre-cement flat sheets – Product specification and test methods". The results below are presented as defined by the standard.

7. Fire performance

Australia

EQUITONE facade materials are fibre cement sheeting, and as such are deemed non-combustible in accordance with the following clauses of the NCC, and may be used wherever a non-combustible material is required.

- C1.9e(iv) of the NCC 2019 Volume 1 (Amendment 1)
- 3.7.1.1(d) of the NCC 2019 Volume 2 (Amendment 1)
- C1.9e(iv) of the NCC 2016 Volume 1 (Amendment 1)
- 3.7.1.2(d) of the NCC 2016 Volume 2

EQUITONE fibre cement façade materials are classified as a 'Group 1' material in compliance with AS5637.1 and Specification C1.10 – Fire hazard properties, of the NCC 2019 Volume 1.

New Zealand

EQUITONE façade materials are classified as Type 'A' cladding materials and fully meet the fire properties requirements of external wall cladding materials as outlined in the Verification Method C/VM2 of the NZBC, with Peak Heat Release Rate (kW/m2) of less than (<) 100 and Total Heat Released (MJ/m2) of less than (<) 25 as determined in accordance with ISO 5660.1 at an irradiance of 50 kW/ m2 for a duration of 15 minutes.

EQUITONE façade materials are classified as a 'Group 1-S' fire resistant material in accordance with the Verification Method C/VM2 (Appendix 'A') and ISO5660, and as such are safe and suitable for internal lining and ceiling applications.

8. Advantages

Providing the application guidelines are followed, EQUITONE fibre-cement sheets have the following superior mix of properties compared to other materials:

- fire safe (no fire ignition, no spread of fire)
- sound insulating
- resistant to extreme temperatures
- water resistant (if in compliance with application guideline)
- resistant to many living organisms (fungi, bacteria, insects, vermin, etc.)
- resistant to many chemicals
- environmentally friendly, no harmful gas emissions

In addition, EQUITONE [lines] has the following specific properties:

- Strong and rigid sheet
- Smooth aesthetic surface with natural hues
- Natural pure colour

TECHNICAL NOTE: E-45/06/en/v7 ANZ/v2

9. Applications

EQUITONE [lines] can be used in the following applications:

- Façade: Rear ventilated façade cladding and detailing to window and doors
- Exterior ceiling: decorative cladding of ceiling
- Weatherboarding
- Eaves and verge boards
- Interior wall lining

10. Cutting and Drilling

Any cutting or drilling dust must be removed from the face of the panel immediately after cutting using a clean microfibre cloth or brush otherwise the aesthetic aspect of the panel may be altered/affected as sawing and drilling dust contains cement and can cause permanent stains on the surface of the panels if allowed to dry in. Once the panel is installed it is recommended to use a clean microfibre cloth or brush to remove any traces of dirt or dust that may have occurred during installation of the panel.

11. Health and Safety Aspects

During the mechanical machining of panels, dust can be released which can irritate the airways and eyes. The inhalation of fine (respirable size) quartz containing dust, particularly when in high concentrations or over prolonged periods of time can lead to lung disease and an increased risk of lung cancer. Depending on the working conditions, adequate machinery with dust extraction and/or ventilation should be foreseen. For more information, please check the Material Safety Data Sheet.

EQUITONE [lines] is certified with an Environmental Product Declaration according to ISO 14025 (available from local support).

The life cycle assessment includes raw material and energy production, the actual manufacturing phase, and the use phase of the fibre cement panels.

12. Maintenance and Cleaning

For minor soiling, washing with a mild household detergent or soft soap solution followed by rinsing with clear water. Refer to EQUITONE cleaning and maintenance documents for further information.

EQUITONE [lines] LT Material Information Sheet

13. Certification

The manufacturer can - within the framework of the European Regulation N° 305/2011 (CPR) - present the Declaration of Performance (DOP) of the product such confirming that the product has a CE marking. The CE marking guarantees that the product is in accordance with the basic requirements determined by the harmonized European standard and applicable to the product. The Declaration of Performance is presented in accordance with the CPR and can be found at www.infodop.com. The manufacturer is also ISO certified.

14. Information

Information on the different applications can be found in the Etex Façade application guidelines. They can be found on the website or can be obtained from local support. Information about external suppliers can also be downloaded from the local websites.
