### ULTRA MOISTURE RESISTANT TECHNOLOGY EXPLAINED

**DESIGNER GROOVE™** All-Purpose Interior Panels are made with MDI polyurethane resin – a revolutionary form of Ultra Moisture Resistant MDF. **DESIGNER GROOVE™** is the only Australian made MDI panel of its kind!

- Unlike traditional Urea Formaldehyde resins, MDI resins do not contain Formaldehyde of any type and do not break down gradually over time in the presence of moisture; this advantage improves their durability significantly.
- The specially formulated MDI resin used in **DESIGNER GROOVE™** panelling increases the durability of the substrate and its resistance to “thickness swelling”.
- The result: a Highly Durable & Ultra Moisture Resistant All-Purpose Interior Panel!
