

**NexGEN Weatherstrip is a proprietary extrusion uniquely crafted to fit snugly within the slotted edges of NexGEN decking, creating a water-tight seal, preventing water from penetrating the surface of the deck.**

NexGEN Weatherstrip is a simple weather-proofing system that allows builders and homeowners to create a dry zone under a raised deck, as well as eliminate water issues from ground level decks providing more usable outdoor living space. NexGEN Weatherstrip makes it possible to add extra outdoor living space and storage areas, with the confidence that they will not be affected by precipitation from the above deck structure. Decks built with NexGEN Weatherstrip require a 1 in 100 fall; pitched away from home, to allow for proper runoff. NexGEN Weatherstrip is easy to install and maintain.

Colour matched screws or Cortex® hidden fasteners are the suggested fastening solution with NexGEN Weatherstrip.

*“A uniquely crafted profile that is designed to fit snugly within the slotted edges of NexGEN decking, creating a water tight seal.”*

## Easy to install:
